ReseedBean.sol salts

1. • Add variable below to .env to deploy diamond to
   0xD1A0060ba708BC4BCD3DA6C37EFa8deDF015FB70

   • `DIAMOND_DEPLOYER_PRIVATE_KEY=58313869dde2eed367f1b7b973c4dd2756f194978bed6c3bb4ea5ab8dc53d55a`

3. Run foundry script to get BeanstalkERC20 bytecode:
   • `forge script script/deployBeanERC20.sol`
4. copy bytecode from output and run `cast keccak <bytecode>` to get init hash
5. Mine for salt: `cast create2 --starts-with 0xBEA --case-sensitive --init-code-hash <hash> --caller 0xD1A0060ba708BC4BCD3DA6C37EFa8deDF015FB70 --deployer 0xD1A0060ba708BC4BCD3DA6C37EFa8deDF015FB70`
6. Copy salt and plug into BEAN_SALT variable in `ReseedBean.sol`
7. Setup anvil `killall -9 anvil && anvil --fork-url https://eth-mainnet.g.alchemy.com/v2/QinESSFdqLrxkUxDRkFLUoK6USVZilUW --fork-block-number 20384062 --chain-id 1337 --code-size-limit 50000`
8. Run reseed `npx hardhat compile && npx hardhat reseed --network localhost`
